***Allowable Subject Matter***

1. Claims 1-20 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. As to claims 1 and 15, the prior arts of record do not anticipate or render obvious to one skilled in the art a light reflective LCD array comprising various elements as claimed, more specifically at least one circuitry layer underlying the first and second metal layers wherein the first metal layer having a plurality of power traces arrayed generally horizontally such that the first plurality of power traces underlies the horizontal gaps and the second metal layer having a second plurality of power traces arrayed generally vertically such that the plurality of power traces generally underlies the vertical gaps and wherein the first and second metal layers prevent light from impinging on the circuitry layer.
4. As to claim 8, the prior arts of record do not anticipate or render obvious to one skilled in the art a reflective LCD array having a plurality of imaging surfaces arranged in rows and columns with gaps there between and an underlying circuitry layer, an improvement comprising a plurality of traces between the circuitry layer and the imaging surfaces and arranged such that the gaps are generally underlain by the traces such that light passing through the gaps is blocked by the traces and thereby prevented from impinging on the circuitry layer.
5. The closest reference Stephenson does not teach or suggest an underlying layer or a plurality of traces between the circuitry layer and the imaging surfaces that prevent light from impinging on the circuitry layer. Further, Stephenson also fails to teach or

suggest first and second metal layers that prevent light from impinging on the circuitry layer as well as the plurality of mirrors. The newly cited reference Sato et al., discloses a liquid crystal light valve having plurality of metal layers. Sato et al. also disclose that the upper most metal layer is partitioned by slits to arrange reflectors as output terminals of the switching elements. Further, Sato also shows a circuitry layer. However, Sato or Stephenson alone or in combination fails to teach or suggest the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
